

Seamless integration of your business and mobile phone.

The UC-One mobile client application delivers a truly unified communications experience. It provides access to mission-critical information and advanced features from your mobile phone, wherever your travels take you.

The UC-One mobile client extends your business communications system to your mobile workforce. Mobile users appear on the system as standard business extensions, allowing them to place calls to other extensions using the built-in dialing directory, or by simply entering any extension number. Outbound calls made using the app reliably travel over the IP data network.

Extending your TelNet services with the UC-One mobile client application helps you...

- **Stay connected, maintain privacy and improve efficiency** – Conduct business from anywhere as if you were in your office and on your business phone without revealing your private mobile number; calls are handled more efficiently
- **Reduce costs** – Minimize cellular usage, or even eliminate the need for an office phone
- **Save time and boost productivity** – Get more done with easy, anytime access to advanced features and applications

Application is available for mobile/smartphones with Apple iOS or Android operating systems.

Key Features

Flexible configurations suit your business needs and lifestyle

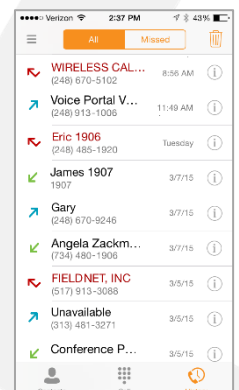

- **Shared** – Business phone number is seamlessly shared on both desk phone and mobile phone, extending features and efficiency beyond the office
- **Standalone number** – Business phone number is used exclusively on mobile phone, providing the business features without the need for a desk phone

Single business phone number works seamlessly in the office and on the road

- Share common business identity on desk phone and mobile phone using same phone number for both devices
- Caller ID shows your business phone number when placing outbound calls from your mobile phone, keeping your mobile phone number private
- Incoming calls can be answered from either desk phone or mobile phone

Instant access to communications and business resources from mobile phone

- View call history (outbound, inbound and missed calls)
- Search and view business contacts via a central corporate directory
- Stay connected and integrated to key business applications such as auto attendant, ring groups and more
- 4-digit extension dialing back to main office while traveling saves time and money
- Single business voicemail, call transfer, 3-way calling, call forwarding, do not disturb and more

NOTE: Features vary by device, settings and quality of signal. When Wi-Fi is not available or cellular usage is selected, phone plan roaming, data and voice usage charges apply.
