# Key benefits

RELIABLE DEDICATED AND MANAGED COLOCATION FOR YOUR BUSINESS

- Leading-edge data center design, engineered for zero points of failure

- Secure physical and virtual environment

- Multiple layers of redundancy for critical power, cooling, network and security systems (N+1 to 2N)

- Exceptional professional technical services and 24/7/365 support

- Business continuity, back up and disaster recovery through nationwide centers

DCIM for a clear view 24/7

TelNet's single-view, Data Center Infrastructure Management (DCIM) tool empowers dedicated colocation clients to monitor and manage their service, mitigate issues and improve performance. It also allows TelNet to deliver a higher standard of service and assurance for all our clients.

Contact us for smart, efficient solutions for your business.

Power, space and connectivity to secure your future

TelNet offers flexible options to house, host or manage your mission critical data/communications equipment in Southeast Michigan's premier Tier III data center. Our state-of-the-art, carrier-neutral facility is engineered to protect your equipment in a clean, secure environment with robust, redundant power, cooling and network elements. Colocation solutions include:

Dedicated Colocation

House your equipment in a secure space with plenty of power, 24/7 secure access and total DCIM management tool.

- Caged or uncaged, full or half rack units of locked cabinet space
- Redundant A/B power feeds
- Optional PDU/ATS units available for single feed equipment
- Network connectivity provided over a routed /30 IP Block, with larger blocks available
- Uplinks supplied at 10/100/1000 Mbps
- Variable data transfer rates available
- Remote Hands available on an emergency or retainer basis

Managed Colocation

Let our data center professionals do the heavy lifting to manage your systems in a secure shared cabinet.

- Fully redundant UPS AC power with bypass switch and surge protection
- Flexible configurations and power options are standard

Hardware and Support

Leveraging premier vendors and our certified technical services team, we provide savings and a single point of contact for your equipment and support needs.

- Professional technical services available for prompt, expert design, build, implementation and maintenance
- Package deals available for equipment and support

Additional Services

- Custom power configurations for additional outlets/amperage
- 10/40 Gbps uplinks
- Public IPv4 and IPv6 space
- Remote Hands and Tech Time
- High density cabinets
- Power Distribution Units (PDUs) solutions available
- Data transfer in GB/month or Mbps increments (95th percentile)
