TelNet QuantumLink

Enhanced MPLS

Head Office

MPLS Network

TelNet QuantumLink Network

Site #12   Site #178   Site #85   Site #15   Site #32   Site #120

KEY FEATURES AND BENEFITS

- **Voice Clarity** - Guaranteed voice quality over any connection-type, even over the Internet.

- **Reliability** - More providers = Better reliability. No longer is your uptime dependent on that of a single provider.

- **Speed** - Combine the bandwidth of each connection for greater speed and network performance.

- **Cost-Savings** - Leverage existing or low-cost circuits to control the access costs of remote sites.

TelNet QuantumLink provides a secure, Internet-based complement to MPLS Networks

Why choose TelNet QuantumLink for MPLS

TelNet QuantumLink technology allows multi-site businesses to get all of the features of TelNet QuantumLink and use them to lower connection costs for remote sites:

Save on hard to reach sites
Some sites stick out on a P&L like a sore thumb. Use TelNet QuantumLink to lower connection costs for those sites.

Added security over the Internet
Wary of the Internet? TelNet QuantumLink is a fully-managed IP VPN that provides security for your sensitive data.

Seamless integration
TelNet QuantumLink was designed to replace costly access connections for remote sites. The system sits "on top" of existing LAN environments, ensuring you still have control over your sites.

How TelNet QuantumLink works with MPLS

TelNet QuantumLink is backed by a patented technology that optimizes network connections such that they can communicate as one single access link, regardless of the number of network suppliers.

It offers the ability to choose virtually any type of connection, regardless of provider, technology, speed, or latency so that you get the bandwidth you truly need. TelNet QuantumLink's QoS Engine was designed to support the use of Internet access connections for Voice traffic.
