Add power to your system for improved voice communications

You've made a significant investment in your PBX and phone system: Now let us help you get the most out of it. TelNet Voice PRI is your PBX booster, delivering the clear, reliable connections your business needs, with the convenient features you want to improve efficiency. This service includes powerful digital channels to handle all your local, long distance and toll-free calling and fax - a distinct advantage for your business.

Fast, seamless installation.

Service connects directly to your phone system's PRI card with no additional equipment required. TelNet Voice PRI works seamlessly with all major phone systems - including traditional and IP-based systems. And our experienced team is actually known for speedy, accurate PRI installations and service turnups.

Get consistent, crystal clear digital call quality.

Our service is designed to deliver better overall connections over our robust and redundant network.

Improve office productivity and savings.

Individual inbound phone numbers, caller ID, and the ability to flexibly route inbound calls to the right place or person within your organization are among standard PRI features that enable your business to be more productive.

You won't miss a call.

Our optional overflow feature ensures calls get through, even during the busiest call periods. Plus PRI Redirect allows you to automatically reroute calls to an alternate number in the event calls can't be completed at your location. It is important feature for business continuity.

Easily manage multiple phone lines with varied use.

TelNet PRI's optional two-way communication paths enable both inbound and outbound calling routed and billed as you like. Whether you have ten employees, a major call center, multiple tenants or otherwise require separate phone numbers and call treatment, TelNet PRI is a robust and flexible solution.
