

## Key benefits

### MAXIMIZE INTERNET AND DATA SPEED

Combine multiple connections from any Internet Service Provider.

### SEAMLESS FAILOVER

Increase network resiliency and virtually eliminate downtime.

### SECURITY

Get end-to-end encryption for secure data transmission over public networks.

### OPTIMIZATION OF APPLICATIONS

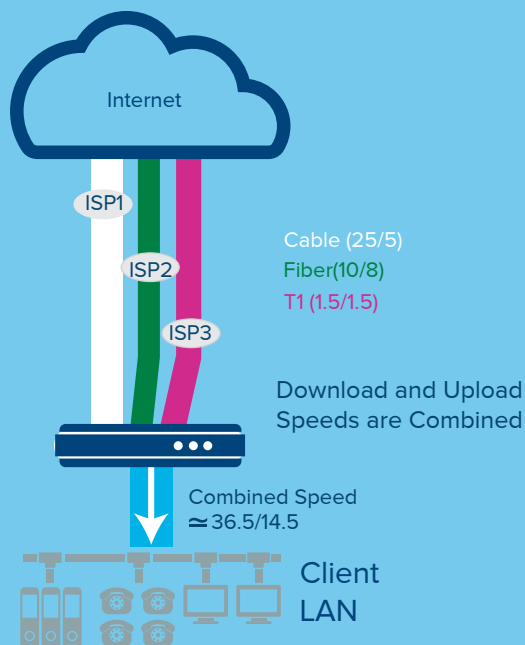

Improve application performance and reliability.

### IMPROVED QUALITY EXPERIENCE

Minimize latency, jitter and packet loss. Deliver exceptional voice quality when combined with IP telephony services.

### APPLICATION VISIBILITY AND CONTROL

Manage and control packet filtering, policies, routes and configurations with a centralized management tool.

## Increase your connection speed, quality and reliability with innovative TelNet SD-WAN technology.

TelNet SD-WAN will improve your network's resilience and performance by combining the bandwidth of multiple connections. If one path fails, traffic is seamlessly rerouted without missing a beat. Supplementary features also improve performance, resiliency and packet integrity. We can also help you add another layer of security to your network with our encryption option.

## Who is TelNet Worldwide?

TelNet Worldwide provides cost-effective solutions with exceptional customer experience for businesses seeking to integrate voice, video and wired/wireless data networks. We specialize in end-to-end solutions and are a trusted partner for flexible, functional customer communications.

**The next generation of Internet accessibility and reliability is here, with TelNet SD-WAN. Contact us for smart, efficient solutions for your business.**
