SD-WAN

BOOST YOUR NETWORK
PERFORMANCE

TELNET
WORLDWIDE

A Flexible Network Solution

Traditional network architecture wasn't built to handle the workloads and complexities of the modern workforce. If your bandwidth is struggling to keep up, you need SD-WAN. Deliver the optimal user experience across your wide area network (WAN) by combining multiple connections into a single source. With this comprehensive network solution, you get the performance and resilience you need to excel in the digital age.

Speed

Combine the bandwidth of multiple connections from any Internet Service Provider to maximize internet and data speeds.

Security

Ensure end-to-end encryption for secure data transmission over public networks with protection from a centralized firewall.

Failover

Increase network resiliency and virtually eliminate downtime with the seamless rerouting of network traffic.

Control

Manage and deploy routing policies with a centralized management tool for constant application visibility and control.

Available Enhancements

Bandwidth Aggregation
Combine the bandwidth of multiple internet connections to increase your network speed.

QoS Elasticity
Apply policies on performance and usage to make all sessions reliable and clean.

Seamless Failover
Ensure reliable service, even during a disruption, with traffic that automatically adapts to a new route.

Transmission Security
Easily encrypt traffic, overlay a centralized firewall and transmit packets across multiple connections.
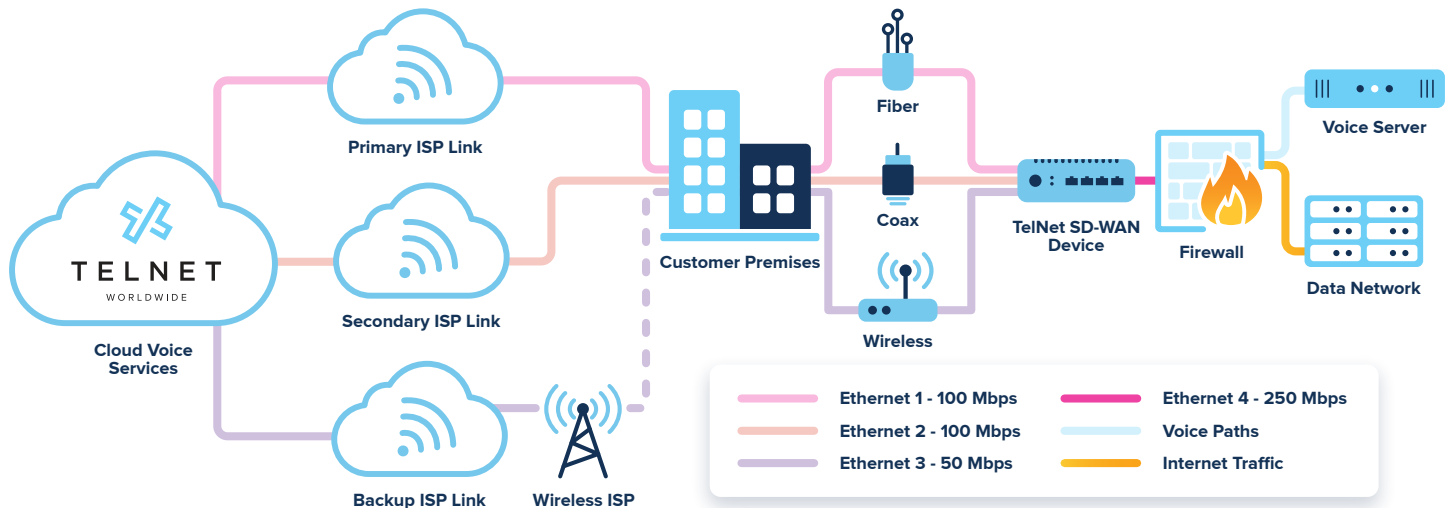

Monitoring and Management
Troubleshoot and relieve IT challenges with the ability to remotely view the entire network with real-time traffic analytics.

Scalability
Adaptively increase network bandwidth by layering on additional lines to scale when necessary.
