

# SIP Trunking

Easily manage your phone system from anywhere in real time

Unleash your voice system's full-feature functionality with the flexibility of SIP Trunking. SIP provides the foundation for deploying innovative applications today and well into the future.

## Unify Your Network

Converging local and long-distance voice over your internet service optimizes the efficiency of your network. SIP allows you to consolidate resources across multiple locations to simplify your network and improve your return on investment.

## Be Prepared

Our built-in business continuity feature enables you to automatically redirect calls to another phone or location in the event of an emergency, whether that's severe weather, fire or a line cut. Business will continue no matter what.

## Stop Overpaying

With SIP Trunking, there's no need to purchase service in 23-channel increments. We simply configure additional SIP call paths on your existing internet connection as your company expands. You customize your number of lines and pay for only what you need.

## Maximize Functionality

Because SIP Trunking is a cloud-based solution, it's easy to implement upgrades and new IP-based features across all your business locations as they become available. There's no hassle of physical installation or extra gear.

## Get to Know TelNet Worldwide

**TELNET**  
WORLDWIDE

Too many businesses struggle with communication technology that's ineffective and frustrating. **We're changing that.** Our empowering, cloud-based solutions simplify the way you communicate and collaborate.

# Features and Functionality

## Service Management Portal

Manage, route, report and view analytics from within our digital portal.

## Static and Dynamic Authentication

We'll configure your SIP Trunks to your preference: credential-based or static IP.

## Calling Name and Number (CNAM)

Caller ID delivery and retrieval customized to your telephone numbers.

## Dual Registration

Enable your IP-PBX to register to multiple data centers in our network to ensure maximum uptime.

## Call Bursting

Never get a busy signal. We'll automatically burst your concurrent session count to fit your needs in real time.

## E911

Automatically route your location information to emergency responders during an emergency call.

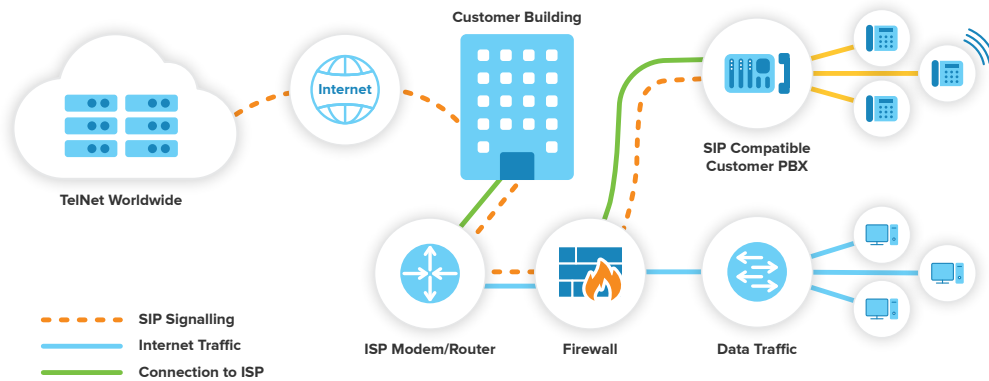

## Call Forwarding

Forward your DID to another phone number or mobile device.

## Call Waiting

Allow a second caller to wait on the line until you are able to take the call.
